Smart Jump Sample

As Figure 2 shows, the made-up beams bend.
The values are listed in Table 1 on the next page.
The load follows from Eq. (3) in the method.
This was first measured by Garner and Holt (2019).
Earlier work [4] found the same.
Section 2 gives the method.

2 Method

The made-up load is found from the stiffness.

$$F = k\,x \tag{3}$$

Table 1: Made-up values for each beam.

Beam A	12
Beam B	15

The picture below is made up.

Figure 2: A made-up beam bending under load.

Figure 2 is drawn above.
